Female hormone panel

SYNTHETIC / SAMPLE - NOT FOR CLINICAL USE

Patient: Priya Sharma | Age: 30 years | Sex: Female

Test date: 15 Jan 2026 | Report ID: SAMPLE-F-2026-01-15

Specimen: Serum (hypothetical) | Cycle day: 3 (early follicular phase)

Test	Result	Units	Illustrative reference
AMH	**1.2**	ng/mL	Age-dependent
FSH	**9.8**	mIU/mL	3.5-12.5
LH	**6.5**	mIU/mL	2.4-12.6
Estradiol (E2)	**48**	pg/mL	12.5-166
TSH	**3.8**	µIU/mL	0.27-4.2
Prolactin	**28**	ng/mL	4.8-23.3

SYNTHETIC SAMPLE

CONTEXT & LIMITATIONS

Prolactin is above the illustrative interval. FSH, LH, E2 and TSH are within their listed intervals; AMH has no single fertility cutoff.

Both samples assume cycle day 3. FSH, LH and E2 intervals are illustrative follicular-phase ranges, not validated day-3 cutoffs. Interpret E2 with FSH and the specific laboratory method; TSH and prolactin use general adult intervals.

AMH is age- and method-dependent and does not establish egg quality or predict natural conception on its own. A change in AMH is not proof of improved fertility.

All patient details and results are fictional and supplied for software demonstrations. This is not a medical record, diagnosis or treatment recommendation. Real results require interpretation by a qualified clinician.

Reference intervals retained from the supplied example; illustrative only. Cycle context: Mayo Clinic Laboratories, FSH and estradiol test catalogs.
