Female hormone panel

SYNTHETIC / SAMPLE - NOT FOR CLINICAL USE

Patient: Priya Sharma | Age: 30 years | Sex: Female

Test date: 15 Jul 2026 | Report ID: SAMPLE-F-2026-07-15

Specimen: Serum (hypothetical) | Cycle day: 3 (early follicular phase)

Test	Result	Units	Illustrative reference
AMH	**1.5**	ng/mL	Age-dependent
FSH	**7.2**	mIU/mL	3.5-12.5
LH	**5.8**	mIU/mL	2.4-12.6
Estradiol (E2)	**55**	pg/mL	12.5-166
TSH	**2.4**	µIU/mL	0.27-4.2
Prolactin	**18**	ng/mL	4.8-23.3

SYNTHETIC SAMPLE

CONTEXT & LIMITATIONS

FSH, LH, E2, TSH and prolactin are within their listed intervals. AMH has no single fertility cutoff.

Both samples assume cycle day 3. FSH, LH and E2 intervals are illustrative follicular-phase ranges, not validated day-3 cutoffs. Interpret E2 with FSH and the specific laboratory method; TSH and prolactin use general adult intervals.

AMH is age- and method-dependent and does not establish egg quality or predict natural conception on its own. A change in AMH is not proof of improved fertility.

All patient details and results are fictional and supplied for software demonstrations. This is not a medical record, diagnosis or treatment recommendation. Real results require interpretation by a qualified clinician.

Reference intervals retained from the supplied example; illustrative only. Cycle context: Mayo Clinic Laboratories, FSH and estradiol test catalogs.
